

ABSTRACT

Methods and apparatus for a simultaneous ring system. The system is configured to be coupled to the end-user line of the telephone network. In response to 5 receiving an incoming call on the user-line, the simultaneous ring system simultaneously ring target phone numbers associated with the telephone number and transfers the telephone call to the telephone network if a connection to one of the target phone numbers is made. These and other advantages of the present invention will become apparent upon reading the following detailed descriptions and studying 10 the various figures of the drawings.
